Accordion the paper along the diagonals and crease hard in both directions to make these folds direction-agnostic.

The diagonals change direction from mountain to valley each time you cross a score line. (This alternation matters—finding specific score line on the sheet doesn’t matter. Don’t stare at this diagram too much.)

Mountain

Valley

Flatten the paper, begin in one corner, then proceed through the rows this way: A soft, 90° angle bend along each zig-zag row may be converted into a bellow by paking until a triangular point forms. Establishing this point will allow the paper to pivot 90°. Then flip over to the back of the sheet and do the next row. The boxes will take care of themselves.
