1. Cut along all the solid black lines.

2. Take the stationary picture template and pin-prick through the corners of the dotted 'frame'. Remove the slot.

3. Take the moving picture. Score and fold the pull-tab forward then glue it together.

4. Glue the slide cover to the top of the stationary picture.

5. Insert the stationary picture strips through the slots in the moving picture. Thread the pull-tab through the slot in the stationary picture. Apply small spots of glue to the top of each cut strip in the stationary picture. Fold the slide cover down over the glue spots.

6. Lift the slide cover, allowing sufficient ease for the pull-tab to slide freely.

7. Tri-fold and tuck under the lower edge of the moving picture.

8. Cut the frame, removing the centre. The pin pricks on the stationary picture mark the position of the frame. Apply glue to the corners of the frame and glue to the marked position on the stationary picture. Reduce the length of the pull-tab if required.
